

Master in Urban Planning International and Comparative Planning Concentration 2024-2025

Advisors: Diane Davis and Magda Maaoui

Email: ddavis@gsd.harvard.edu and Magda Maaoui

Other Concentration Faculty: Eve Blau, Ann Forsyth, Li Hou, Rahul Mehrotra, Peter Rowe

This concentration within the MUP program is intended to provide a solid professional and academic preparation in the field of international planning. The concentration responds to three global concerns. The first is the rapid population growth and territorial expansion of cities in the developing world, where most of the planet's populations now reside. The second is the increasing importance of urbanization in the national development trajectories of those countries. Accelerating urban growth directly impacts employment opportunities, health and livability conditions, infrastructure priorities, and investment needs, among other factors. Likewise, these transformations call into question the social, economic, and political practices and institutions that scarcely a few decades ago were as likely to focus on rural as urban problems, offering both challenges and opportunities for citizens and governing authorities to chart a new future through planning, design and the management of cities and their hinterlands. The third motivating concern is the fact that cities and regions in the developing world have been drawn into extractive networks, transnational civil society connections, global governance agreements, and multilateral institutional arrangements that can either enable or constrain their relative autonomy to pursue planning priorities of their own choosing. In this sense, the fate of citizens who live in the developing world must be seen as internationalized, for both good and bad, thus challenging the ghettoization of international development planning as a concern for only the poorer countries seeking to 'catch up.' Because of this, the concentration recognizes that planners can draw profound lessons from a comparative perspective on urban, regional, and national phenomena, drawing across South-South as well as North-South experiences of different countries and across diverse urban environments, and understanding the parallels and the relations among cities around the globe.

Within the concentration, students can focus broadly on international planning or concentrate on several subthemes that speak to pressing problems related to different developmental conditions. The latter topics might include informality, poverty, environmental sustainability, service scarcities (especially in transportation, housing, water, and health services), social exclusion, and governance, including the potential for participatory planning. Students are encouraged to develop their interests with a focus on a single country in a particular region (such as Latin America, South Asia, the Middle East, or Africa, to name just a few). To successfully satisfy the concentration requirements, students must complete 12 units from the list of preapproved courses provided below or from other courses that have been selected by the student and approved by the concentration advisor. Students intending to undertake the concentration in international planning should begin to map out courses early in their program to be sure that they are able to take advantage of courses offered in only one term or in alternate years.

As Harvard and other local universities offer a wide variety of courses relevant to international planning, the list below is not exhaustive. If students would like to include alternative courses to satisfy the 12-unit concentration requirement, they should speak early on with Diane Davis to ensure that the courses are suitable. Participation in some of the courses listed below may require permission from their instructors, and it is the student's responsibility to contact such instructors to ascertain whether admission is possible. For course offerings in other schools at Harvard or at other universities, it is recommended that students approach the instructor early to ensure it is possible to take the course. Students are advised to review the course pages of the respective schools and departments to be sure that no changes to listings have taken place.

Please be aware that course offerings are subject to change. New courses may be introduced, while some of the approved courses listed here may not be available every year. This memo is subject to revisions based on course availability. Courses that are not mentioned in this memo do not automatically have approval and may only be approved after a review and written permission from the Concentration Advisor(s).
